The Smart Tracking Solution

NOVATRACK

**Communications
Command
Control**

Interoperable & Modular Solution for...

Automatic Vehicle Location (AVL)

Managing vehicles and drivers

Mobile Computing

Real-Time organisation of the field forces

Personal Tracking

Reliability for lonely workers

Blue-light organisations

Maximum security in extreme situations

Web-Based Interface

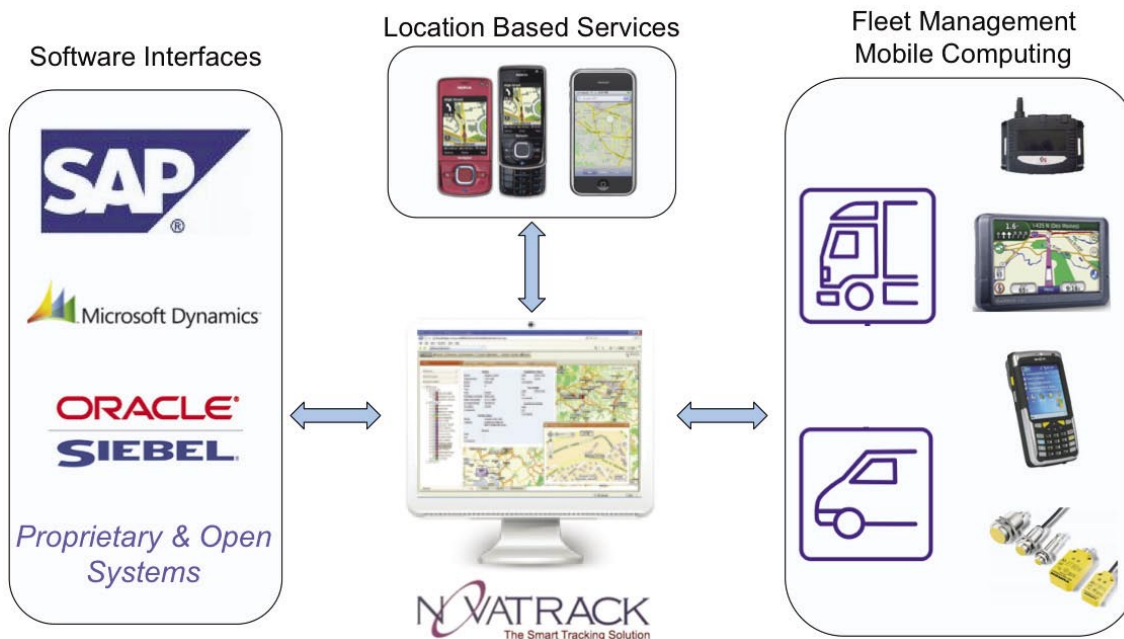

Easy-to-use web-based interface so Users can access their account anytime, anywhere, from any computer.

State-of-the-Art Mapping & POI

Users see the unit location information on road maps, orthofotos, satellitybrid views.

Address Search & Routing

Get the address representation or the routing to your destination using the most recent data.

History Replay

The history replay feature allows users to retrieve vehicle information from the previous 12 months.

Multilingual

The application is available in English, French, German, Italian, Spanish and open for more languages.

Geo-Fencing & Alarms

The active geo-fence boundary monitoring tracks when a vehicle enters or exits a user-defined area or passes close to a defined Landmark.

SMS and e-mail alarms can be triggered by a status or by a user defined Business Logic.

Custizable Reporting

With the customizable reporting feature, your vehicle/fleet information is available within seconds in different formats.

You can generate the reports manually or schedule them in order to receive them directly into your mailbox.

Maintenance Module

Schedule the different maintenance services of your vehicles and get a reminder by SMS or e-mail once the time has come.

Tour Optimisation

Planning and optimising your mobile teams' schedules in real time, while adapting to the constraints of your resources and your customers' needs.
